

DTN MetConsole® Automatic Terminal Information Service (ATIS)

Delivering the right information at the right time.

Keeping flights on time and those aboard safe requires a critical exchange of communication between air traffic controllers and pilots at just the right times. The MetConsole Aviation Suite makes it easy with the Automatic Terminal Information System (ATIS). It automates the sharing of routine, non-control information from air control to pilots, while a VOLMET in the cockpit ensures crews have the most relevant, current information from the airfield. So pilots are better prepared for takeoffs and landings. And traffic controllers can focus their energy on ensuring safe, timely flights.

The DTN ATIS:

Improves efficiency through reduced staff workloads at ATC.

Minimizes human intervention, reducing the risk of human error.

Reduces the communication load on VHF air/ground channels.

Ensures compliance with required guidelines and regulations.

Increases coherence and consistency in communication.

Enhanced safety. Increased efficiency.

To keep a busy airport running without any hitches, air control has to be continually transmitting operational and meteorological information to nearby aircraft. But that can represent a large burden on the part of the controller, taking time away from the most important work: guiding incoming and outgoing flights. ATIS and VOLMET automate these routine communications, minimizing manual effort and giving controllers more time to engage with departures and arrivals.

How it works

- Weather data is continuously gathered from field instrumentation and other airport systems.
- Data is calculated, processed, and verified for quality.
- Information is automatically reported through continuous voice and data flow.
- MetConsole ATIS/VOLMET is fully compliant with ICAO Annex 11, Annex 3, and Doc 9377 to ensure you meet required regulations.

Customized to your exact preferences

- Supports multiple languages, including English, Spanish, Portuguese, French, German, and more.
- ATIS is sensor-independent, so you can use the sensors that best suit your operation.
- The system is fully customizable to the unique specifications of your airport or facility.

The DTN advantage

- We've been independently rated as having the most accurate weather forecasts.
- Our proprietary technology makes us a market leader in weather observation systems.
- We offer unique observations, location-based forecasts, and the most advanced decision support tools.

Why DTN?

DTN is the independent, trusted source of actionable insights for 600,000 customers focused on feeding, protecting, and fueling the world. Customer-centric and employee-driven, DTN focuses on empowering agriculture, oil and gas, trading, and weather-sensitive industries through continuous, leading-edge innovation. The company produces *The Progressive Farmer* magazine, the premier publication in agriculture. DTN is based in Minneapolis with offices globally.
