

SEASONAL BLEND-DOWN

MEETING THE CHALLENGES

01.

INVENTORY

Ensure you have a holistic, real-time view

Your inventory doesn't sit in one place. If you want to turn tanks efficiently, you need a solution that gives you broad, real-time visibility into all of your terminals, pipelines, railcars, and trucks.

ALLOCATIONS

Be able to scale and communicate quickly

Once you have a holistic understanding of your inventory positions, you may need to scale allocations forward or back. It's more critical than ever at this time that you have a solution that allows you to do this automatically across groups, as well as communicate the changes to impacted customers.

02.

03.

PRICING

Competitor intelligence is key

A complete view of what your competitors are doing allows you to price more attractively and move more fuel. Once you set your prices, top suppliers send electronically in order to be displayed within best buy applications.
