

9 tips for smarter spraying this season

1 Start with the right tip

Check with the label & your dealer to determine the right nozzle tip for the job.

2 It's all in the match

Be sure to match the product, pressure, & ground speed to your nozzle tip.

3 Weather matters

Factor even minor wind & rain risks in to your application timing.

4 Minimize your sway

If you have anti-sway technology, use it. If not, adjust your speed & driving technique.

5 Control your height

Ensure good coverage with auto boom height control or by monitoring the space between the boom & your target.

6 Keep it clean

Always follow proper clean out procedures to avoid contamination & crop damage — especially with dicamba products.

7 Trust the directions

Carefully follow label instructions for triple rinsing & pay special attention to cap ends.

8 Have a spare set

Save time by having a spare, clean nozzle set ready; put your used tips in a bath.

9 Follow the rules

Make sure you know the local rules for spraying rinsate — and follow them.
