

Find and fix problems while they're small

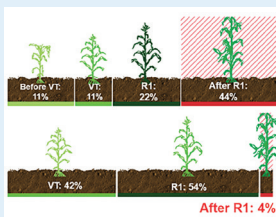

Insects and crop diseases cost your customers significant yield and money. **Help protect their interests with DTN Agronomic Insights' proactive information and tools.**

With it, you'll be able to get ahead of pest issues before they spread. Make targeted recommendations and demonstrate greater value by showing the economic impact of proposed treatments. Improve the timing of your applications with critical operational insights, ensuring maximum effectiveness. With DTN Agronomic Insights, you'll be able to prioritize your efforts, save time, help more customers, and deliver the level of service that leads to greater loyalty.

Economic impact

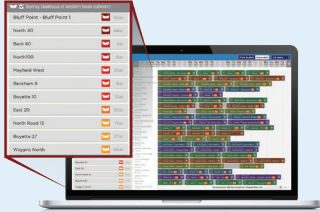

Easily see the financial impact of issues, based on their severity. You'll know if you'll lose or save money on an application and be able to help maximize your customers' return on investment.

Soybean and corn diseases

Get risk alerts and tools to prioritize fields based on the likelihood of disease. By spotting problems sooner, you can treat more quickly, minimizing their impact.

DTN Agronomic Insights

Western bean cutworm

Incidents of these pests are on the rise. Combine with DTN Smart Traps to identify fields with the highest likelihood of egg masses, ensuring faster, more effective treatment.

Growing degree-days and growth stage

Better predict plant development and maturity dates with a growing degree-day calculator and automatic growth stage modeling.

Sentinel satellite imagery

Better visualize, analyze, and document issues with color, NIR, and NDVI satellite imagery, delivered throughout the season.
