

# DTN TABS Supply Event Notification.

Get instant, end-to-end visibility into supply events when you add this optional module to your DTN TABS solution

Outages, shortages, maintenance, and significant weather events can all wreak havoc on your supply availability. To help you better manage these issues, we've created an optional supply event management module for use with DTN TABS. With it, you'll have an instant, end-to-end view of your supply events.

## Quickly identify issues

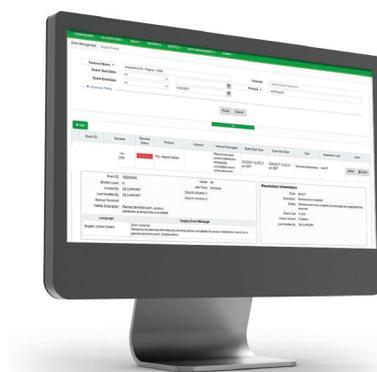

Now you can easily spot supply issues by term or product with targeted, automated alerts. You'll be able to quickly determine the locations and customers impacted—and notify your team so they can take immediate action to ensure the highest level of customer service.

## Instantly alert customers

Your customers make high-stakes decisions each day, and communication is critical to their success. With our supply event module, you can immediately notify impacted customers with proactive, targeted emails or SMS text messages. To reduce inconvenience, you can include alternate lifting locations—helping your customers avoid costly issues at the terminal.

## Save time and money

By better managing supply issues, you and your customers can increase efficiencies around events. Your customers can improve dispatching decisions and be able to lift needed product. Your team can reduce countless hours of manual work thanks to the module's automated tools, tracking, and reporting functions—all right within your DTN TABS.
