

In the calm before the storm

Equip your sites
with WZBob and achieve
simultaneous, site-wide
lightning alerting

TYPICAL SYSTEM SETUP

WZBOB EXPANSION

WZBob seamlessly integrates with your existing lightning detection system. It is a completely automated system, with a simple setup, and comes with a real-time system health and monitoring service.

Weatherzone's WZBob expansion system extends your lightning alerting capabilities in the field, ensuring your staff stays safe and aware.

With a combination of light beacons, sounders, and a modular, scalable configuration, you can customize the setup to suit any site arrangement and maximize your coverage.

Improve lightning risk awareness

Ensure simultaneous site-wide lightning risk communication, not only for your operations but also contractors and visitors who don't have access to an existing alerting system. The light and sound alerts give everyone adequate time to act quickly when thresholds are breached.

Reduce incidents in the field

When lightning alerting systems are limited only to mobile phone notifications, they can be easily missed and be a distraction. Providing clear light and sound-based on-site alerts decreases your team's reliance on mobile phones, keeping their focus on the work at hand.

Customized to your response plans

WZBob can be customized to your trigger action response plans and other requirements, ensuring you are solidifying the safety of your sites based on your existing, functional parameters. We like to keep it simple.

KEEPING YOUR PEOPLE AND ASSETS SAFE

Gain seamless, scalable integration

WZBob easily integrates with your existing lightning detection network, providing a no-fuss option for increased safety coverage that is scalable.

Save time with a simple setup

The solution is easy to install, completely automated, and supported by a real-time system health and monitoring service.

Increase your detection accuracy

Ensure lightning proximity accuracy by utilizing our Weather and Lightning Alerting System (WLAS) alongside WZBob. Their dual effectiveness increases safety and reduces unnecessary shutdowns.
