

Maximize the Benefits of DTN TABS with These Modules

You've experienced how DTN TABS gives you complete control over lifting operations: control over inventory, control over credit, control over supply, and control over partners. Now, you can extend that control to reduce your risks even further.

With our DTN TABS modules, you'll enjoy even more precise control of your products in your markets. Together, they can help you eliminate exposure to loss and increase customer satisfaction.

DTN TABS modules are:

- **Easy:** they're intuitive with a customizable control structure to suit your unique operations.
- **Secure:** they prevent bad debts and ensure the promised customer product is physically available.
- **Flexible:** they allow you to instantly adjust allocations, credit, and messages as your market changes.

Enhanced credit module

Reduce financial exposure with tighter credit controls. See what is available to customers, and decide to increase or decrease available credit based on real-time lifting information.

Forecast module

Use a customer's lifting history to predict allocation requests and modifications. You can make allocations at customer or channel levels and create them automatically. Then, customize the forecast with seasonality data for unique lifting allocations tailored to risk prevention and customer experience.

Making long-term forecasts through the customizable interface helps protect your business for the coming year, and surprising customers by anticipating their needs elevates your business and strengthens partnerships.

Forecast viewer module

Enable proactive communication by letting your customers see what you anticipate they'll need. Customers are given a set timeframe to review your decisions before they take effect. If a customer spots a potential issue or wants to request additional volume, they can contact you for resolution — preventing problems and frustration.

Customer-managed alerts module

Not every customer wants or needs the same allocation notifications. Let them determine when and why they'll be alerted. This cuts down on noise, making working with you easier — and improves the likelihood they'll work with you again.

Supply event module

Surprises at the terminal are rarely good. Shortages, outages, maintenance, and significant weather events can all wreak havoc on your supply availability. This module automatically notifies you with alerts targeted by term or product, so you can quickly determine the locations and customers impacted. Then, your team can take immediate action, ensuring the highest level of customer service.

Planned movement module

Allow customers to create a pre-order BOL that automatically decrements against product allocation and credit. When customers can plan better, they feel more confident in doing business.

Load assist dashboard module

This convenient, at-a-glance dashboard provides the immediate information your customers need at the rack, including product allocation, available credit, BOL details, and transaction history. It also streamlines terminal troubleshooting and problem resolution, making DTN TABS even more efficient for you and your customers.

In addition, this process-driven analytical tool enables supply analysts and other stakeholders to serve customers without directly accessing the DTN TABS database, ensuring greater security and reducing employee training time.

Terminal viewer module

Give your customers insight into the optimal time to lift with an hourly graph display that shows your busiest lifting times.

BOL push module

When a BOL is available in DTN TABS, push it directly into your back office, simplifying and speeding the billing process. Faster invoicing and revenue processes also help improve customer relationships.

DTN TABS alerts module

Let a supplier manage DTN TABS by sending information about system behaviors via email or SMS. This allows them to communicate conveniently when they need to make changes.

Maximize TABS efficiency

When fully leveraging all of these powerful DTN TABS modules, your business gains a significant edge over the competition, greatly reducing financial exposure, improving customer experience, and providing unprecedented control over every aspect of your business.

Credit allowance, product allocation, options to instantly adjust to rapidly changing market conditions, customizable alerts, and more are all backed up by the best customer support in the industry.

With the deepest penetration into and experience in every aspect of downstream energy, DTN TABS is unquestionably the standard for refined fuels market management. If you're looking for better control over your business, ask your DTN representative how we can help.

We are the digital hub for our refined fuels customers, connecting refiners, terminals, carriers, wholesalers, and end customers.

Our unmatched scale and penetration in the North American market allow us to deliver innovation and cutting-edge solutions through joint product development with our customers – many of whom are major industry suppliers.
