# IQFeed provides more complete information

When analyzing the market and making trades, there's no substitute for fast, reliable, and broad data. Big institutions know this and pay top dollar for premier data services. But if you're with a small company or on your own, how do you procure this at an affordable price?

An information aggregator since 1984, DTN is the leading supplier of data for the physical cash commodities market. Our IQFeed® product suite delivers real-time, historical, and intra-day data for securities market analysis, plus additional market indicators that many competitive services don't include.

- Tier 1 domestic market data direct from the exchanges.
- Streaming quotes, charts, and news covering domestic equities, foreign currency exchange, and domestic and international futures markets.
- Stock and option quotes from the Nasdaq, NYSE, AMEX, Canadian, and all equity options exchanges.
- Futures, futures options, and futures spread quotes from the CBOT, CME, NYMEX, COMEX, NICE, KCBT, WPG, MGE, NYSE LIFFE, LME, and SGX exchanges.
- Small Exchange services that offer small, standard, and simple futures for all levels of traders requiring smaller investments.

Our information comes from our own ticker plant and data centers, so it's as fast and reliable as it gets.

We also offer Small Exchange services that provide the efficiency of futures and the clarity of stocks.

# Information delivered exactly how you want it.

For as much information as IQFeed contains and presents, it's remarkably easy to use and understand — helping you reach conclusions and decisions faster than your competition.

IQFeed is most commonly presented as a simple application on a standard PC.

Continual innovation through new features and services that help you be more competitive.

Monitor up to 1,300 symbols with a customizable watchlist, spreadsheet-style functionality, and DDE linking.

IQFeed is compatible with most third-party packages. These include Ensign Software, TradersSoft, IQXP, Medved QuoteTracker, Wave59, AbleSys, NeoTicker, AmiBroker, WealthLab, InvestorRT, and TradingSolutions.

Advanced charting functions help you identify trading trends using a graphical display of tick, interval, and historical data.

Data is updated, tick-by-tick, in moving averages, trendlines, and other analytical studies.

If you prefer to use your own proprietary application, IQFeed still can provide true unfiltered, tick-by-tick data with up to 500 simultaneous symbols, so you can see every trade and quote in real time.

IQFeed provides a variety of alerts — audio, on-screen, email, pager, cell phone, and text-to-speech.

IQFeed also provides an API interface for users who want to develop their own applications.

News scrolls provide coverage of market-moving events 24 hours a day, seven days a week.
