How DTN FastRacks helps you win

Remember when 24-hour pricing was common downstream? Modern technology has changed all of that. Rack prices now change multiple times every day since buyers need real-time pricing information.

And those without, fall further behind every single day.

DTN FastRacks®, a data communications platform, provides the latest market prices and rack analysis available in customizable data formats, exactly the way you want it. DTN FastRacks uniquely delivers actionable insights that move you ahead of your competition to make the best purchasing decisions.

An true edge in today's market. Here's how:

Featuring the fastest, most comprehensive, most accurate pricing information in the industry, DTN FastRacks includes approximately 800 unique products at more than 1,900 terminals across the United States and Canada, gathering 96% of its information electronically, minimizing human delays and errors.

Prices are updated in real time—throughout the day—as suppliers in the market make moves and change prices. When prices change, alerts are sent in real time. Each is a detailed analysis of intra-day rack price changes, giving you a complete picture of the ever-changing market including multiple terminals in a single alert.

To analyze rack averages and overnight rack price movements, snapshot position reports are delivered every day beginning at 5:15 a.m. CST. Follow-up reports are sent throughout the day to monitor changes.

DTN delivers information the way you want it, in many formats and systems. We have a team of experts available to help determine the ideal format for your needs.

Combining speed and accuracy with history

In addition to a constant, real-time flow of information, DTN FastRacks History has a wealth of historical data to help add context, informing better decisions.

The rack repository maintains three years of spot market and supplier prices for branded and unbranded products in gasoline, diesel, ethanol, and propane at more than 340 wholesale locations.

What can you do with this?

- Improve customer and contract pricing decisions
- Compare suppliers for most favorable pricing
- Review branded versus unbranded
- Improve hedging by understanding product trends at certain racks over time
- Validate your index contract prices or determine which would be more beneficial
