

Energy Digital Commerce

Drive up to 40% more sales while increasing business efficiencies

In today's low-margin fuel selling business, your operation's success depends on your ability to take advantage of every transaction opportunity. Execute more spot contracts, increase sales volume, and maximize your margins with new ways to reduce friction within the selling process, achieving a competitive edge in volatile markets.

The Energy Digital Commerce (EDC) platform now integrates industry-leading price indices, empowering sales and marketing teams to optimize pricing strategies, automate transactions, and boost sales volumes in today's dynamic market.

With Energy Digital Commerce, you can:

- **Optimize data-driven pricing** – with newly integrated industry-leading price indices, EDC empowers your team to make informed pricing decisions that maximize margins and competitiveness.
- **Modernize sales processes** – instantly set and post prices across the entire market each morning and close transactions quickly by negotiating prices and terms without increasing your headcount.
- **Digitize deal capture and order processing** – automatically generate and send order confirmations to buyers and upload sales orders directly into your ETRM with back-office integration.
- **Easily reconcile information** – reduce accounting errors and processing times with improved workflows that help you validate information from various sources.

Perform seamless back-office integrations

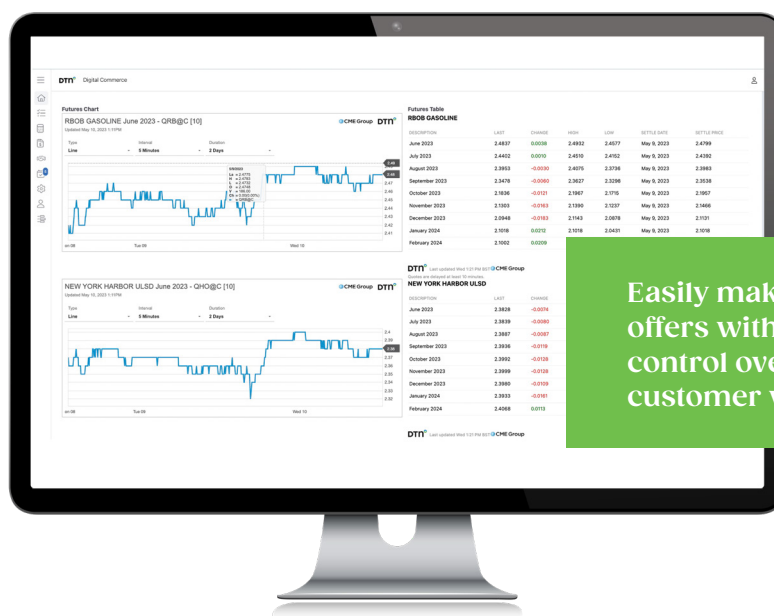

Significantly reduce administrative tasks by uploading orders directly from Energy Digital Commerce into your ETRM systems via an API that works alongside any existing messaging center or portal.

Enhance price visibility and distribution

Enjoy complete control over your customers' visibility into your pricing, available products, volumes, and opening hours with the ability to edit offer prices and turn them on or off at any time. Plus, you can seamlessly post your prices for customers.

Elevate contract management

Transferring your customer contracts — both intraday and fixed-term — to Energy Digital Commerce allows you to automatically provide custom information to each buyer, including payment terms, credit amounts, and lifting terms.

Easily make and edit offers with complete control over customer visibility.

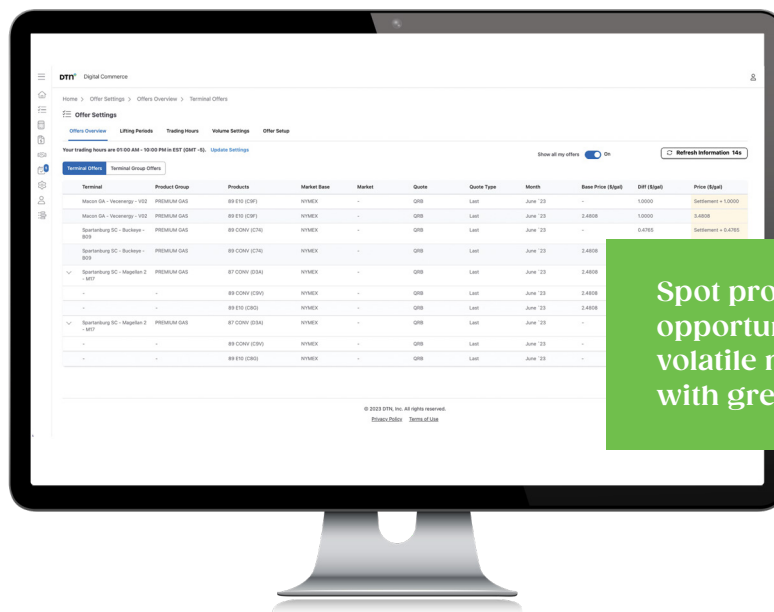

Take advantage of market volatility and optimize margins by up to \$0.02 per gallon.

Automated allocation management

Automate allocation setup to enable buyers to pick up product immediately, improving experiences with real-time decrementing of supplier allocations and lowering the cost of serving your customers.

Easily integrate with DTN TABS®

Offset risks, reduce transaction times, and eliminate errors by automating business processes undertaken by your sales, ERP, and clearance teams with easy integration with DTN TABS.

Spot profitable opportunities in volatile markets with greater ease.

Complete up to 10 times more contracts by eliminating deal set-up time.

With its ease of integration, Energy Digital Commerce quickly improves overall management of your fuel sales process. Start today to make more informed decisions, increase efficiency and maximize your margins. See the difference Energy Digital Commerce can make for you.
